2. Project Overview

KharidoNow is a complete online clothing store inspired by the shopping experience of platforms like Amazon and Flipkart. It provides a light, simple, and responsive interface for customers, plus a secure admin panel for managing the catalog, orders, customers, reviews, and coupons.

The original request asked for a WordPress e-commerce site. Because PHP/WordPress/MySQL were not available on the development machine, the project was implemented as a **Node.js + Express** application that delivers the same functional flows (storefront + admin CRUD + order lifecycle) and can be extended into a real production store.

> **Brand:** Site name is **KharidoNow**. Logo artwork is included in the header, footer, and admin login. Brand colors follow the logo palette: navy blue and vibrant green on a light UI.

3. Technologies Used

3.1 Core stack

Layer	Technology	Purpose
Runtime	**Node.js** (v24+)	Server-side JavaScript runtime
Web framework	**Express.js** (^4.21)	HTTP routing, middleware, static files
Templating	**EJS** (^3.1)	Server-rendered HTML pages
Session	**express-session** (^1.18)	Login sessions, cart, recently viewed, CSRF token, flash messages
Password hashing	**bcryptjs** (^2.4)	Secure password storage for users/admins
File uploads	**multer** (^2.3)	Admin product image uploads
IDs	**uuid** (^11)	Unique IDs for products, orders, users, reviews
Data storage	**JSON file** (`data/store.json`)	Persistent store without requiring MySQL

3.2 Frontend technologies

Technology	Purpose
HTML5	Page structure (via EJS templates)
CSS3	Responsive layout, brand theme, admin shell
Vanilla JavaScript	Mobile menu, admin menu, live search suggestions
Google Fonts — DM Sans	Clean modern typography
Unsplash image URLs	Seeded clothing product / category visuals

3.3 Tooling & environment

Tool	Purpose
npm	Dependency install and `npm start`
Windows / PowerShell	Local development environment
Node fetch smoke scripts	Automated checks for login, cart, checkout, admin

3.4 Why these technologies

- Runs without PHP, MySQL, Apache, or Docker on the current machine.
- Fast to start for demos and college/project submissions.
- Clear separation: routes (Express) → views (EJS) → data (JSON) → assets (CSS/JS).
- Easy migration path later to PostgreSQL/MySQL and real payment gateways.

4. System Architecture

```
Browser (Customer / Admin)
        │
        ▼
 Express Server (server.js)  ← Port 3000
   ├── Session middleware (cart, auth, CSRF, flash)
   ├── Storefront routes (/shop, /cart, /checkout, …)
   ├── Admin routes (/admin/…)
   ├── EJS views (views/)
   ├── Static assets (public/)
   └── Data layer (lib/db.js → data/store.json)
```

Requests are rendered on the server (SSR). Cart and login state live in the session cookie. All catalog, order, and user changes are written back to `data/store.json`.

5. Folder Structure

```
wordpress-e-commerce/
├── server.js                # Main application entry
├── package.json             # Dependencies & scripts
├── README.md                # Quick start
├── data/
│   └── store.json           # Auto-created database file
├── lib/
│   ├── db.js                # Load/save/seed data
│   └── helpers.js           # Money format, cart totals, CSRF, pagination
├── public/
│   ├── css/style.css        # Store + admin styles
│   ├── js/app.js            # Search suggest + menus
│   └── images/logo.png      # Brand logo
├── uploads/                 # Admin-uploaded product images
├── views/
│   ├── partials/            # Header, footer, product card
│   ├── home, shop, product, cart, checkout, …
│   └── admin/               # Dashboard, CRUD screens, login
└── scripts/                 # Smoke test scripts
```

6. Features — Customer Storefront

Discovery

- Home with deals, featured, men/women sections
- Category browsing (Men, Women, Kids, Ethnic, Footwear, Accessories)
- Full-text search + live suggestions
- Filters: category, gender, price, sort
- Pagination (8 products per page)
- Recently viewed products

Buying

- Product page with size & color
- Delivery date estimate
- Add to cart / Buy now
- Update qty / remove items
- Coupons: WELCOME10, FLAT200
- Checkout with address + COD / demo UPI

Account

- Register / login / logout
- Edit profile (name, phone, password)
- Saved addresses
- Wishlist
- Product reviews & ratings
- Order history & tracking page
- Cancel order (Pending / Confirmed)

UX extras

- Responsive desktop & mobile layout
- Sticky header + mobile nav
- Flash success/error messages
- Free shipping threshold ₹499
- INR currency formatting

7. Features — Admin Panel

Admin URL: **http://localhost:3000/admin/login**

Module	Operations
Dashboard	Counts for products, orders, customers; revenue; recent orders
Products	Create, read, update, delete; image URL or file upload; featured flag; stock; sizes/colors
Categories	Create, update, delete
Orders	List/filter by status; open detail; update order status + payment status + notes/timeline
Customers	List customers; delete
Reviews	List; delete
Coupons	Create percent/flat coupons; toggle active

Order statuses supported: Pending → Confirmed → Packed → Shipped → Out for Delivery → Delivered · also Cancelled / Returned

8. User Roles & Demo Credentials

Role	Email	Password	Access
Admin	admin@kharidonow.com	admin123	Full admin panel + store
Customer	user@kharidonow.com	user123	Shop, account, orders, wishlist

> Change these passwords before any public/production deployment.

9. Routes / API Map

9.1 Storefront

Method	Path	Description
GET	/	Home page
GET	/shop	Catalog with filters & pagination
GET	/api/search?q=	JSON live search suggestions
GET	/product/:slug	Product detail
GET/POST	/cart…	View / add / update / remove / coupon
GET/POST	/checkout	Place order
GET	/orders, /order/:orderNo	Order list & detail
POST	/order/:orderNo/cancel	Customer cancel
GET	/track	Public order tracking
GET/POST	/wishlist…	Wishlist
POST	/review	Submit review
GET/POST	/login, /register, /account…	Auth & profile

9.2 Admin

Method	Path	Description
GET/POST	/admin/login	Admin authentication
GET	/admin	Dashboard

CRUD	/admin/products…	Product management
CRUD	/admin/categories…	Category management
R/U	/admin/orders…	Order status management
R/D	/admin/customers…	Customer management
R/D	/admin/reviews…	Review moderation
C/U	/admin/coupons…	Coupon management

10. Data Model

Stored in `data/store.json` as collections:

- **users** — id, name, email, phone, password (hash), role
- **addresses** — linked to userId
- **categories** — id, name, slug, image
- **products** — sku, name, slug, brand, price, comparePrice, stock, sizes, colors, gender, categoryId, image, ratings, featured
- **orders** — orderNo, items, totals, address, payment, status, timeline
- **reviews** — productId, rating, comment, user
- **coupons** — code, type (percent/flat), value, minOrder, active
- **wishlists** — userId + productIds[]

On first run, `lib/db.js` seeds ~20 clothing products, categories, demo users, sample coupons, and one sample order.

11. Business Rules

- **Shipping:** Free if (subtotal − discount) ≥ ₹499; otherwise ₹49.
- **Coupons:** Applied only if active and minimum order is met.
- **Stock:** Reduced on checkout; restored if customer cancels (Pending/Confirmed).
- **Payments:** COD = Pending; demo UPI = Paid.
- **CSRF:** All state-changing POST forms require a session CSRF token.
- **Auth guards:** Customer routes need login; admin routes need role = admin.

12. UI / UX Design Notes

- Light theme for easy shopping (not dark-mode heavy).
- Primary navy `#1e40af` and accent green `#16a34a` from the logo.
- Amazon/Flipkart-like patterns: top offer bar, sticky search header, category nav, filters sidebar, price summary, order timeline.
- Mobile breakpoints collapse grids, show menu toggles, and stack product/admin layouts.

13. How to Run

```
cd "path\to\wordpress-e-commerce"
npm install
npm start
```

Then open **http://localhost:3000** in a browser.

Default port is **3000** (override with environment variable `PORT` if needed).

14. Testing Checklist

1. Home loads with logo and categories.
2. Search “shirt” shows suggestions and shop results.
3. Open a product → choose size/color → Add to cart.
4. Apply coupon WELCOME10 or FLAT200.
5. Checkout with COD → order confirmation + tracking timeline.
6. Customer cancels a Pending order.
7. Admin login → edit product, change order status to Shipped/Delivered.
8. Resize browser to mobile width → nav and grids remain usable.

15. Going Live (Production Path)

This project can become a real working website. Recommended next steps:

1. Deploy Node host (Render, Railway, VPS, etc.) + custom domain + HTTPS.
2. Replace JSON storage with PostgreSQL or MySQL.
3. Integrate Razorpay / PayU / Stripe for real payments.
4. Add email/SMS order notifications.
5. Move secrets to environment variables; rotate admin password.
6. Add privacy policy, refund policy, and GST/invoice support as required.

WordPress alternative: If a hosting plan with PHP + MySQL is available, the same business flows can be rebuilt using WordPress + WooCommerce. This Node project remains a complete functional reference/prototype.

16. Limitations & Future Scope

Current limitation	Future enhancement
JSON file database	SQL/NoSQL database + migrations
Demo payments	Live payment gateway webhooks
Single product image	Image gallery / zoom

No inventory warehouses	Multi-warehouse / pincode SLA
Basic search	Full-text / recommendation engine
Session cart only	Persistent cart for logged-in users across devices
